

Notice to all Repair Centre Users and eGlass Users

# Estimating Profile Update

**Date published:** July 22, 2021

MPI continues to work closely with Mitchell Estimating on creating and implementing the new 2021 LVAA Estimating profile and Long Expansion file. MPI is working diligently to complete the tasks necessary to provide all accredited repair facilities with the updated profiles as soon as possible. The Long Expansion file and all update instructions are targeted for release to users on August 5, 2021.

As communicated on [July 12, 2021](#), MPI will process retroactive payments to repair facilities covering differences in labour rates and refinish material allowance. Estimates will not be supplemented by MPI during this process. The following are the only applicable changes to compensation:

- Body labour rate
- Refinish labour rate
- Frame labour rate
- Glass labour rates
- Paint material allowance

Until you receive the updated Estimating profile and Long Expansion file, you are required to submit claims based on your current Estimating profile by applying the estimating standards and policies applicable to the Long Expansion file that you currently have.

Once you receive the updated Estimating profile and Long Expansion file, you may apply the new Estimating profile to any claim you have not yet submitted for payment.

Mitchell will be updating eGlass the last week of July. MPI will notify all eGlass users when this has occurred.

If you have any questions please contact your Shop Relationship Advisor, or [MPI Partners](#).
