Pilot – Accessory Sourcing

Date published: August 11, 2023

In response to feedback provided through the [Technical & Parts Consultation Committee](#), MPI will be conducting a pilot with representatives from the trade to explore workflow efficiencies when sourcing and validating aftermarket [Accessories and Special Order Parts](#).

In order to facilitate small scale pilots of this nature we are introducing the Supported Workflow which is an expansion and renaming of the Restricted Estimate Handling process. The Restricted Estimate Handling job aid has been revised and renamed [Supported Workflow Processing](#) to assist impacted shops accessing estimates. Additionally, both the [Issues Resolution](#) and [Repair Shop Support](#) pages on MPI Partners have been revised.

Results of the pilot will be shared upon completion via the Technical & Parts Committee and any changes resulting from the pilot will be posted on MPI Partners.

Please email partners@mpi.mb.ca if you have any questions about this notice.
