

Notice to all Light Vehicle Accredited Repair Shops

# Updated Vehicle Group List

**Date published:** February 17, 2021

To help repair shops calculate a more accurate RPS target, an updated vehicle group list is available. The new list will provide 99.5% accuracy at an industry level.

Exceptions will always exist despite the high accuracy rate due to manual entries related to dealer plates, and rental policies having manually entered vehicle information. The updated vehicle grouping list provides the most likely vehicle grouping for a make and model. Over the coming months, we will implement continuous improvement initiatives in an attempt to reduce the exception rate below the current 0.5% rate.
